

Professional Summary:

Mainframe developer with 7.5 years of industrial experience. Worked with major clients in development, support and enhancement projects. Possess good knowledge in mainframe technologies - COBOL, JCL, VSAM, DB2 along with Big data technologies - Hive, Pig and visualization tools like Excel and Tableau. Good exposure to Unix and HDFS environment. Eager to learn new technologies and work in a cross skill platform. Completed PG course in Artificial Intelligence & machine learning and looking for a suitable role in a company where my prior experience in legacy platforms can be put to use alongside my academic knowledge to achieve modernization goals and also help me grow as an individual.

Technical skills:

- Operating Systems : Z/OS, OS/390, Windows, UNIX, HDFS
- Languages: C, SQL, Cobol, Python, PIG, HIVE
- OLTP: CICS
- Database: DB2, Oracle, MySQL
- FMS: VSAM
- Tools and Utilities: XPEDITOR, SPUFI, QMF, FILE-AID, Endeavor, ChangeMan, TSO/ISPF, MQ SERIES, Solace, Winscp, Splunk, ServiceNow, DollarU, CTLM, Grafana, Google Colab

Experience:

Atos Syntel Europe, London UK.

Consultant: Jul 2022 - till present.

Client: American Express	Project: Credit Authorization System
--------------------------	--------------------------------------

Responsibilities:

- Point of contact for service delivery management and escalations.
- Member of Technical Design Authority for complex and major design changes.
- Design/test/implement new enhancement of current projects and provide necessary support to avoid negative impact on production process.
- Identify/fix data quality issues. Schedule corrections in Control M, ad-hoc data patching activities, manual extraction and data processing.
- Diagnose underlying root cause of complex application issues, deploy fixes by changing application code, fine-tuning stored procedure, data correction, reorg activity on database tables and scale vulnerable infrastructure component capacity.
- Resolve technical issues and user queries related to application process & ensure critical process completed within SLA.
- Diagnose major incidents using Splunk. Check application logic to identify end-to-end process flow and back trace issue to narrow down root cause.
- Work with integrating application teams, monitor application performance via reporting tools and visualization charts to fine-tune the application parameters and load balancing to avoid major fallbacks.
- Providing assistance to other development teams with code deployment, integration testing, and validations. Collaborate with functional analysts, developers, and development managers to ensure that all solutions are implemented on schedule.

Atos Syntel, India.**Associate Consultant: Jul 2018 - Jun 2022.**

Client: American Express	Project: Child GCP Interactive – US AR
--------------------------	--

Responsibilities:

- Analysis of programs and preparing technical program specifications.
- Closely involved and working with other applications impacted.
- Perform due diligence of changes to ensure application releases meet support criteria before being deployed into the production environment.
- Make code changes and test modules as per requirement using Changeman, Topaz.
- Helping front-end applications with their testing requirements and validating results.
- Proactively identify and communicate issues leveraging standard alerting tools, and work to resolve issues liaising with 3rd party resolver teams as necessary.
- Involved in Performance Improvement initiatives include optimizing the system further for saving CPU time and effectively dollar amount for Amex.
- Build out strong relationships with application development teams and resolver groups.

Capgemini, India.**Associate Consultant: Nov 2015 – June 2018.**

Client: Synchrony Financial	Project: Joint/Co-applicant Credit card Program
-----------------------------	---

Responsibilities:

- Analyzing business requirements and preparing HLD/LLD.
- Build activities like coding, development, Unit testing etc
- Resolving SIT and UAT defects.
- Creating similar test environments as production baseline for testing JCLs, which included Subroutines and source code of COBOL program transfers in the test region.
- Preparing progress reports, weekly and monthly status reports and metrics.
- Interacting with Business for User acceptance testing and maintaining good rapport with Client.
- Implementing automation tools to reduce manual efforts.
- Supporting Deployment and post validation activities.

Education:**Great Lakes Executive Learning in colab with UT Austin** – PG Diploma in Artificial Intelligence & Machine Learning. (2019-20)**Bachelor's degree** in Electronics and Communication Engineering, K L University (2011-2015).**Language Proficiency** - English, Hindi, Telugu.
